

How far down the list each variant sits (better is towards the top right)

SpliceAI background is an evenly spaced sample of the locus (amendment A5). Each panel is censored at the resolution of its own background, one allele in 39,144 (0.0026%) in (a) and one in 28,401 (0.0035%) in (b). Both panels match the two tools on the PROPORTION of their own background flagged, never the raw count; the unit throughout is the alternate allele.
